EDUCATION

Georgia Institute of Technology

Computer Engineering

Atlanta, Georgia

Jan 2026 – Present

- o **Specialization:** Cybersecurity, Computer Hardware & Emerging Architecture

Georgia State University

Computer Engineering

Atlanta, Georgia

Aug 2024 – Dec 2025

- o **GPA:** 4.0/4.0

- o **Awards:** President's List (Fall '24 & '25, Spring '25, Summer '25), Freshman STEM Scholar

- o **Relevant Coursework:** Circuit Analysis, Object-Oriented Programming, Discrete Mathematics

Stanford University & DeepLearning.AI on Coursera

Remote

Machine Learning Specialization

Certificate Issued July 2024

- o **Relevant Coursework:** Supervised Machine Learning: Regression and Classification, Advanced Learning Algorithms, Unsupervised Learning, Recommenders, Reinforcement Learning

EXPERIENCE

Scale AI

Remote

AI Response Consultant

July 2024 – Present

- Improved AI language models through detailed, criteria-based evaluations, resulting in a 15% increase in accuracy and reducing error rates by 10%
- Evaluate the model's ability to fulfill user requests comprehensively, focusing on accuracy, relevance, and completeness of generated responses
- Provide detailed comparative assessments of multiple model outputs for each prompt, offering insights into relative strengths and identifying areas for potential improvement

CAMPUS & COMMUNITY INVOLVEMENT

Computer Science Club (GSU)

Atlanta, Georgia

Member

Sept 2024 – Dec 2025

- Worked with students on challenging coding challenges and group projects to improve problem-solving and programming skills
- Joined hackathons and other coding competitions to apply classroom knowledge in real-world scenarios
- Attended weekly meetings to stay up to date with current technologies and developments in machine learning and artificial intelligence
- Participated in project demos, sharing knowledge and learning from others work in software development

Mathematics Club (GSU)

Atlanta, Georgia

Member

Sept 2024 – Dec 2025

- Attended meetings and math-related discussions to explore problem-solving strategies
- Participated in study sessions to prepare for exams and strengthen understanding of mathematical concepts
- Led small group sessions by walking through challenging problems and explaining solutions to peers

PROJECTS

FitFolio – Technologies Used: *JavaScript, React, Redux, Python, Flask, Docker*

[Repository](#)

- Managed a **PostgreSQL** database for data storage, optimizing application performance through efficient data storage, indexing, and query planning capabilities and ensuring data integrity with by implementing data validation protocols
- Deployed using **Docker** containers, which helped simplify the deployment process and improved the application stability
- Designed a RESTful API using **Flask**, **Alembic** for migrations, and **SQLAlchemy** for object relational mapper (ORM), this secures communication by encrypting communications via HTTPS and increases application stability

StretchBreak – Technologies Used: *JavaScript, Python, Flask, TensorFlow*

[Repository](#)

- Implemented computer vision models using **TensorFlow** to detect stretching movements in real-time.
- Built the backend using **Flask** and **Python**, enabling seamless communication between the extension and machine learning models.

SKILLS

Programming Languages: Java, Python, JavaScript, SQL

Web Development: React, Redux, Node.js, Express, Flask, HTML/CSS

Development Tools: Git, GitHub, Docker, AWS, TensorFlow, PostgreSQL, SQLAlchemy, Sequelize
